Water Treatment Gold

Bacterial control for waste water control

Councils are now prioritising the regulation of waste water and solids and will soon be commencing remote testing of effluent and increasing fines and costs.

CleanPrint has developed Water Treatment Gold (WTG), a systemised product to reduce solids after an initial increase due to system cleaning, whilst improving separation and delivering cleaner waste water when working with CleanPrint and Water Technology Systems.

WTG is bacterial based containing five different non-pathogenic strains of bacteria. Each has been carefully chosen for its ability to degrade the specific organic material in your waste water.

FEATURES/BENEFITS

- Easy to use
- 100% natural
- 100% safe
- No harsh chemicals or acids
- Non-toxic & non-caustic
- No damage to the environment
- Continues to work after dosage

RECOMMENDED USES

- Industrial Waste Water
- Water Remediation Sites

HOW DOES IT WORK

When the environmentally friendly, non-pathogenic bacteria within WTG comes into contact with organic waste, it produces enzymes to break down the complex compounds that make up the waste, allowing the bacteria to degrade them. This cycle continues until the available food source has been totally depleted. The concentration of bacteria within the product will out compete any other bacterial strains that may be present and have the potential to cause malodours from the waste, this is a process called competitive inhibition.

APPLICATION

This product can be dosed automatically or manually depending on the requirements. When dosed manually, a predetermined amount of product should be applied to the affected area. When automatically dosed, a control unit must be installed and drums changed over as required.

Water Treatment Gold is unique, simple, safe and effective

Cleaning in Place - Enzyme and bacteria based series detergents do not require plant to be disassembled.

Other corrugated box industry products include:

SUPER BIOCLEAN 5G - For automatic anilox cleaning

SUPER STARCH OFF - For controlling starch build ups

WATER TREATMENT HYDRO - Bacterial control for waste water control

WATER TREATMENT SUPER ENZYMES - Biodegradable enzyme control for waste water
